
Graph Classification And Clustering Based On Vector Space Embedding

classification - nc state computer science - classification with graph structures • graph classification (between-graph) – each full graph is assigned a class label • example: molecular graphs • vertex classification (within-graph) – within a single graph, each vertex is assigned a class label • example: webpage (vertex) / hyperlink (edge) graphs toxic course faculty student ... **graph classification using structural attention** - (c) attention-based graph classification figure 2: comparison of different classification problems. traditional glimpse-based attentional processing in (a) takes several glimpses of the input before classification. on the other hand, graph classification without attention in (b) takes the entire input graph and uses it for classification. **graph classification via topological and label attributes** - graph classification via topological and label attributes geng li, murat semerci, blent yener, and mohammed j. zaki renselaer polytechnic institute, troy, ny tbogazici university, istanbul, turkey {lig2,yener,zaki}@cs.rpi, semercim@gmail abstract graph classification is an important data mining task, and **the more you know: using knowledge graphs for image ...** - the more you know: using knowledge graphs for image classification kenneth marino, ruslan salakhutdinov, abhinav gupta carnegie mellon university 5000 forbes ave, pittsburgh, pa 15213 fkdmarino, rsalakhu, abhinavgg@csu abstract one characteristic that sets humans apart from modern learning-based computer vision algorithms is the ability to **graph classification based on pattern co-occurrence** - derive a classification model to distinguish between graphs of different class labels. we focus on a binary classification that assigns a graph to either a positive class or a negative class. note that this binary graph classification model has many applications. for example, proteins, whose structures can be represented by **an end-to-end deep learning architecture for graph ...** - the graph by drawing analogies with two popular graph ker-nels. moreover, we will show that the last graph convolution layer's output zh can be used to sort the graph vertices in a ... an end-to-end deep learning architecture for graph classification muhan zhang, zhicheng cui, marion neumann, yixin chen ... **uncertainty quantification in graph-based classification ...** - graph uncertainty quantification 571 setting, and to multiclass classification in particular. our focus is on a presentation which puts uncertainty quantification at the heart of the problem formulation, and we make four **positive and unlabeled learning for graph classification** - graph pu learning method can effectively boost the graph classification performance using only positive and unlabeled graphs. the rest of the paper is organized as follows. in section ii, we discuss related work on graph classification and pu learning. in section iii, we propose an optimization frame- **gaia: graph classification using evolutionary computation** - performing these classification tasks by hand is intractable computationally, thus increasing attention has been devoted in developing graph classification methods in recent years. 1.1 related work existing research often assumes a binary graph classification task where a target graph set and a background graph set are given and **learning graph representations with recurrent neural ...** - then used for graph classification and comparison tasks. we demon-strate the effectiveness of our approach by showing improvements over the existing state-of-the-art on several graph classification tasks, including both labeled and unlabeled graphs. keywords representation learning, deep learning, recurrent neural net-works, graph classification
