[12] a branch of mathematical chemistry which deals with the nontrivial applications of graph theory to solve molecular problems was defined as chemical graph theory. he noted that a chemical structure is graph with the atoms as the vertices of the graph and the molecular bonds as the edges. the cgt in **applications of graph coloring in modern computer science** - graph theoretical concepts are widely used to study and abstract—graph coloring is one of the most important concepts in graph theory and is used in many real time applications in computer science. the main aim of this paper is to present the importance of graph coloring ideas in various
